

VinTech Corp Incident Response Playbook

VinTech Corp - Internal Document - Doc No. OPS-003 - Version 1.0

1. Purpose

This playbook describes how VinTech Corp employees should report and how the Security team should handle security and operational incidents, including suspected data breaches, system outages, and unauthorized access attempts.

2. Reporting an Incident

Any employee who suspects a security or operational incident must immediately report it to the IT Security team via the internal helpdesk portal or the emergency security hotline, providing as much detail as possible about what was observed.

3. Initial Triage

Upon receiving a report, the on-call Security analyst performs an initial triage to determine whether the report constitutes a confirmed incident, and assigns a severity level of Low, Medium, High, or Critical based on potential business impact.

4. Escalation Timeline

The security team must escalate any confirmed incident within 24 hours of detection to the Incident Response lead and relevant department heads. Critical incidents must be escalated immediately upon confirmation, without waiting for the full 24-hour window.

5. Containment and Investigation

The Incident Response team isolates affected systems, preserves relevant logs and evidence, and investigates the root cause of the incident in coordination with IT and, where relevant, external forensic specialists.

6. External Notification

Where an incident involves personal data, the Legal and Data Protection teams determine whether external notification is required, in line with the notification timelines set out in the Data Privacy Policy.

7. Post-Incident Review

Following resolution of any Medium, High, or Critical incident, the Incident Response team conducts a post-incident review to document root cause, remediation actions taken, and recommendations to prevent recurrence.

8. Contacts

The IT Security team and Incident Response lead can be reached through the internal helpdesk portal, the emergency security hotline, or the dedicated security mailbox monitored around the clock.
