

VinTech Corp Engineering On-Call Policy

VinTech Corp • Internal Document • Doc No. HR-017 • Version 1.0

1. Purpose

This policy describes the on-call rotation and additional compensation for Engineering staff responsible for responding to production incidents outside of standard working hours.

2. On-Call Rotation

Engineering teams operate a weekly on-call rotation, with a primary and secondary on-call engineer assigned via the on-call scheduling tool. Rotations are typically published one month in advance.

3. Responsibilities

The on-call engineer must be reachable and able to respond to a page within 15 minutes at any time during their on-call week, including evenings, weekends, and public holidays.

4. On-Call Compensation

Engineers receive a flat on-call stipend of \$200 per week of on-call duty, in addition to their regular salary. Any active incident response time during on-call hours is separately compensated as overtime, calculated per the rate described in the Benefits Guide.

5. Escalation

If the primary on-call engineer does not acknowledge a page within 15 minutes, the alert automatically escalates to the secondary on-call engineer, and subsequently to the engineering manager if still unacknowledged after 30 minutes.

6. Swaps and Coverage

Engineers may swap on-call weeks with a teammate, provided the swap is recorded in the scheduling tool at least 48 hours in advance.

7. Post-Incident Recovery

Engineers who handle a significant overnight incident may take compensatory time off the following day, subject to manager approval.
