

VinTech Corp Asset Disposal Procedure

VinTech Corp • Internal Document • Doc No. OPS-015 • Version 1.0

1. Purpose

This procedure describes how retired hardware and other Company equipment is disposed of securely.

2. Identifying Assets for Disposal

IT and Facilities jointly review the asset inventory periodically to identify hardware that is end-of-life, beyond economical repair, or no longer needed.

3. Data Sanitization

Before disposal, IT performs a certified data wipe on any device capable of storing data, such as laptops, desktops, and storage drives, in accordance with the Data Privacy Policy's requirements for secure data deletion.

4. Verification

IT records confirmation of successful data sanitization for each asset in the asset management system before the item is approved for physical disposal or resale.

5. Disposal Method

Sanitized equipment is either donated, resold through an approved electronics recycler, or physically destroyed if it cannot be safely sanitized, in line with local e-waste regulations.

6. Sensitive Equipment

Equipment that has held highly sensitive data, such as production database servers, is physically destroyed rather than resold or donated, regardless of successful data wipe confirmation.

7. Recordkeeping

Disposal records, including data sanitization confirmation and disposal method, are retained for 3 years for audit purposes.
