

VinTech Corp Customer Support Escalation Procedure

VinTech Corp • Internal Document • Doc No. OPS-007 • Version 1.0

1. Purpose

This procedure describes how customer support tickets are escalated between support tiers, distinct from the Incident Response Playbook, which covers security and operational incident escalation.

2. Support Tiers

Customer support operates across Tier 1 (frontline support), Tier 2 (technical support), and Engineering (product/engineering escalation) for issues that cannot be resolved by support staff.

3. Tier 1 to Tier 2 Escalation

Tier 1 must escalate a ticket to Tier 2 within 2 hours if the issue cannot be resolved using standard troubleshooting steps or knowledge base articles.

4. Tier 2 to Engineering Escalation

Tier 2 must escalate a ticket to Engineering within 8 hours if the issue remains unresolved and is suspected to involve a product defect or requires an engineering-level fix.

5. Priority Levels

Tickets are assigned a priority level (Low, Medium, High, Urgent) at intake, which determines target response and resolution times separate from the escalation timelines above.

6. Customer Communication

Support agents provide the customer with a status update at each escalation step, and Tier 2 or Engineering provides estimated resolution timelines where possible.

7. Relationship to Security Incidents

If a support ticket is found to involve a suspected security issue, such as unauthorized account access, it is immediately routed to the Security team under the Incident Response Playbook, rather than following the standard Tier 1/Tier 2/Engineering escalation path.
