

VinTech Corp Disaster Recovery Plan

VinTech Corp • Internal Document • Doc No. OPS-006 • Version 1.0

1. Purpose

This plan describes VinTech Corp's approach to recovering IT systems and data after a major outage or disaster, distinct from the Incident Response Playbook, which focuses on security incident detection and escalation.

2. Scope

This plan covers major infrastructure failures, such as data center outages, catastrophic hardware failure, or large-scale data corruption affecting production systems.

3. Recovery Objectives

Critical systems must be restored within 4 hours (Recovery Time Objective, RTO). Data loss must not exceed 1 hour of data (Recovery Point Objective, RPO), based on the frequency of backups described in the Data Backup Policy.

4. Activation

The Disaster Recovery Plan is activated by the VP of Engineering or the on-call engineering leader when an outage is assessed as unlikely to be resolved through normal incident response within a reasonable timeframe.

5. Recovery Procedure

The recovery team fails over to the designated backup region or environment, restores data from the most recent valid backup, and validates system integrity before directing traffic back to the recovered environment.

6. Communication

During an active disaster recovery event, the Incident Response lead provides status updates to affected internal stakeholders and, where customer-facing systems are impacted, to the Customer Support team for external communication.

7. Testing

The Disaster Recovery Plan is tested at least twice per year through a scheduled failover exercise, with results and any required plan updates documented by Engineering.
